July 2024

WE ARE READY TO WORK ON RESULT-1!

Through our project, we aim to develop two key outputs.
The first of these is an **"Education Module for Sustainable Entrepreneurship,"** designed to foster more environmentally conscious individuals and entrepreneurs within vocational high schools. This module employs the Project-Based Learning (PBL) approach to enhance sustainable practices in education.

As part of this initiative, representatives from each partner country convened in Amsterdam for a Learning, Teaching, and Training Activity (LTTA) with two participants per country.

This three-day intensive training, organized by our Dutch partner, Global Education Center B.V., on March 19-21, 2024 and focused on Green Entrepreneurship and Project-Based Learning.

With this productive session completed, we are now fully prepared to advance the development of our project's first output.

WHAT IS NEXT?

Following recent training achievements, our team is developing an interactive module on sustainable entrepreneurship, with contributions from partner countries.
Key topics include:

- **Sustainable Business Models**
- **Green Marketing**
- **Environmentally Conscious Product Design**
- **Social Responsibility in Business.**

Using PBL, students will gain hands-on experience by working on real-world projects, enhancing their understanding of sustainability.
